Create your event

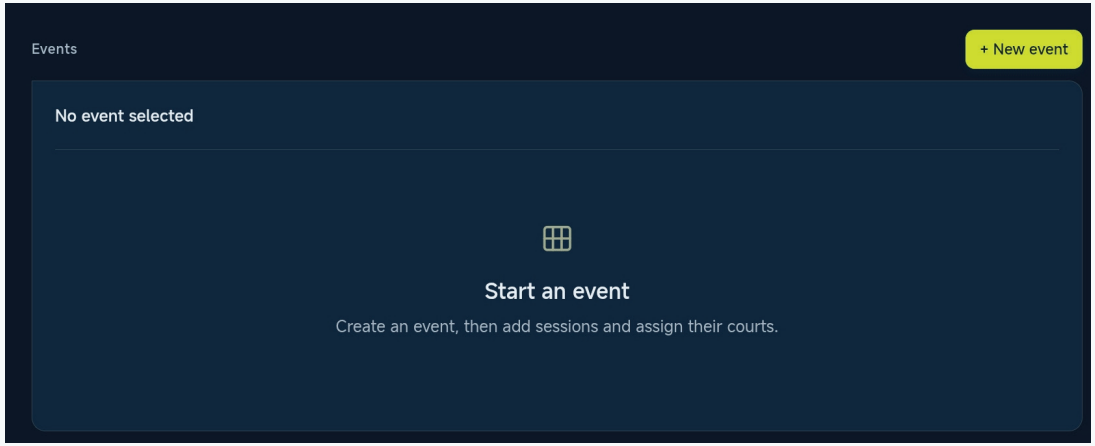

Start with one event, then organize its sessions and courts.

1 Sign in

Open **https://mop.matchpointop.com/login** and sign in with your account.

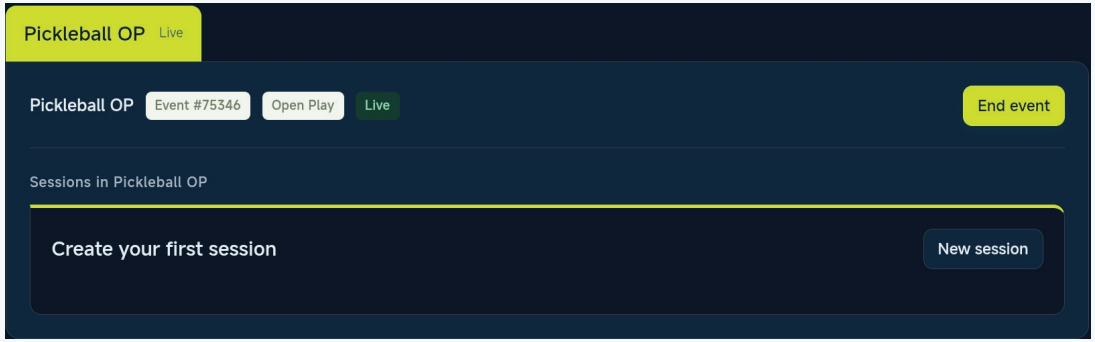

2 Create an Open Play event

In **Overview**, tap **+ New event**. Enter the event name, choose Open Play, and complete the form.

3 Open your event

The event appears as a tab. Select it, then tap **New session** to create your first group.

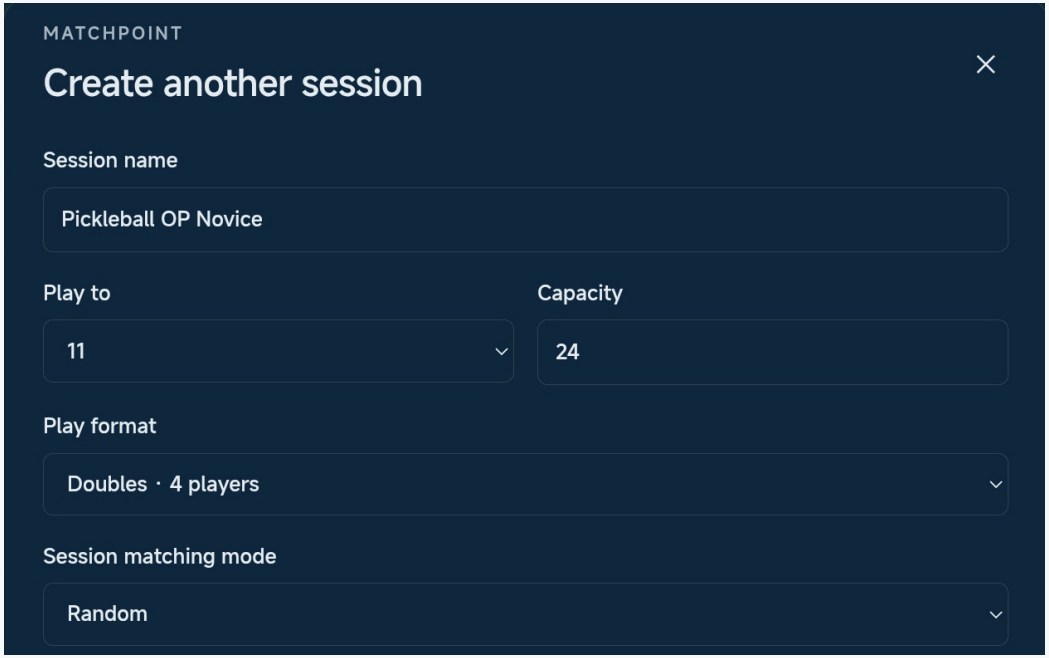

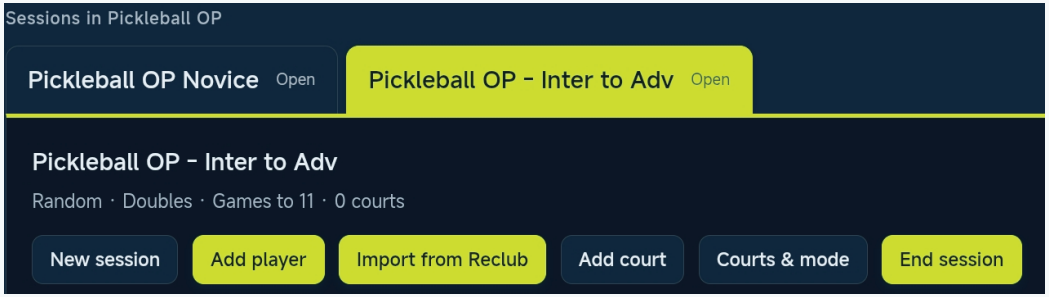

Before you begin: connect all devices to the internet. Use landscape on the admin tablet and scoreboard.

Your event contains the sessions you create next.

Create one or multiple sessions

Example: Novice and Intermediate to Advanced under the same event.

1 Set up the session

Tap **New session**. Enter its name, play-to score, capacity, play format and matching mode. Scroll down and submit the form.

2 Add another group

Tap **New session** again in the same event. Give the next session a distinct name and choose its settings.

3 Switch using the session tabs

Select a tab before adding courts or players. Each session has its own courts and player queue.

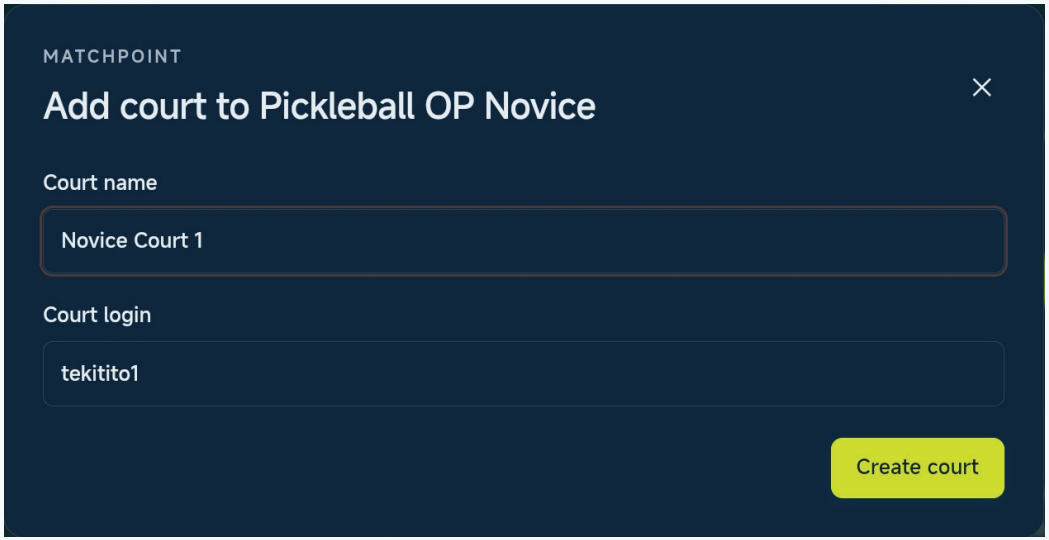

Prepare players: use Add player or Import from Reclub, then check players in through Players & queue so they can join matches.

Add courts and register a scoreboard

Repeat these steps for each court and its scoring device.

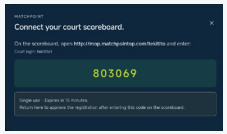

1 Create the court

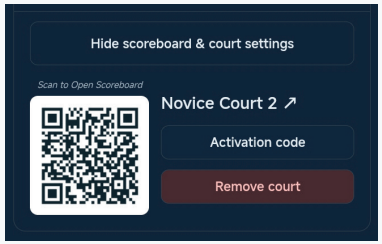

Select the session, tap **Add court**, enter a court name and court login, then tap **Create court**.

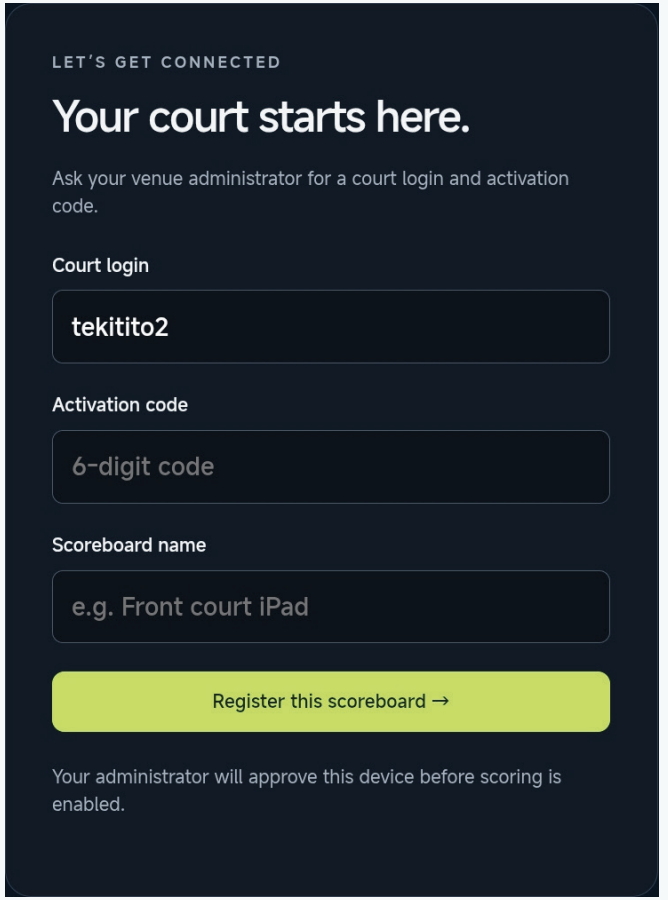

2 Get the court QR and code

Open **Show scoreboard & court settings**. Tap **Activation code** to get a fresh 6-digit code.

Codes are single-use and expire in 15 minutes.

3 Register on the scoring device

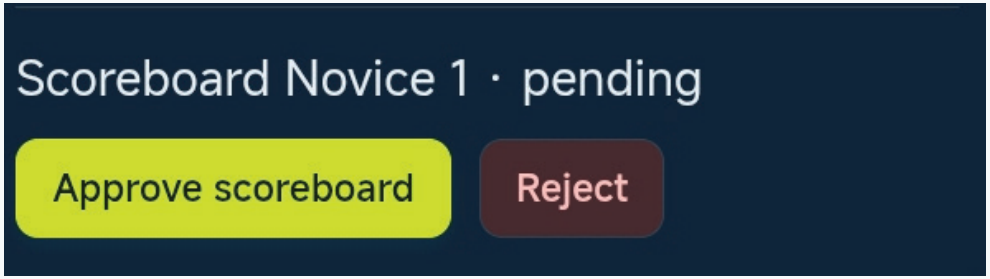

Scan that court's QR or open its link. Enter the **same court login**, its code and a device name. Tap **Register this scoreboard**.

Approve the scoreboard and start play

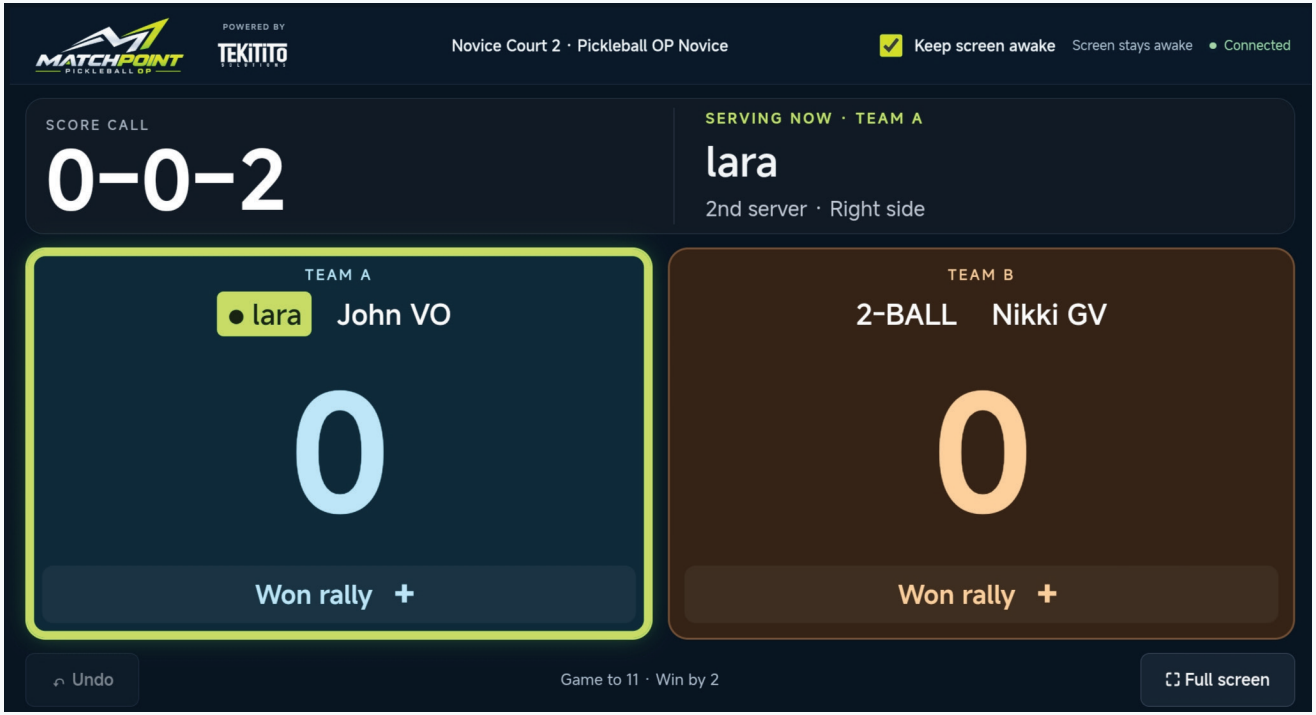

The administrator approves the device before it can score games.

1 Approve the device

Return to the court settings on the admin screen. Find the pending device, tap **Approve scoreboard**, then confirm.

Approval replaces any existing scoreboard for that court.

2 Start a game

Check players in, review **Up Next**, then tap **Start game** on an available court.

3 Score each rally

On the scoreboard, tap **Won rally +** for the winning team. Use **Undo** to correct the last action.

Enable Keep screen awake and use Full screen. The highlighted team and server name show who serves next.

Share the live view and player queue

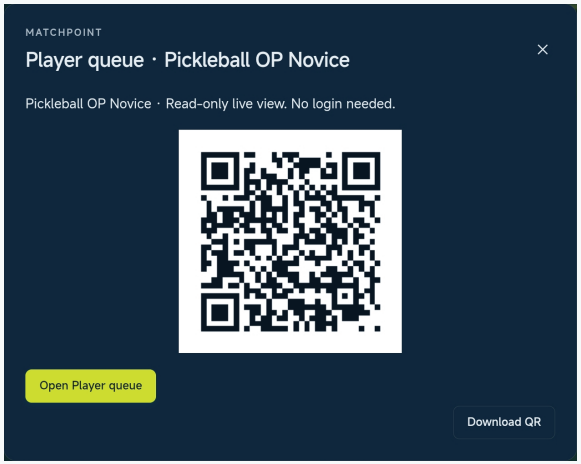

Choose the session first. Both public views are read-only and need no login.

1 Public live event view

Tap **Admin public dashboard**, then **Open Admin public dashboard**. Display it on a shared screen to show courts, live scores, Up Next and the waiting list.

2 Player queue QR

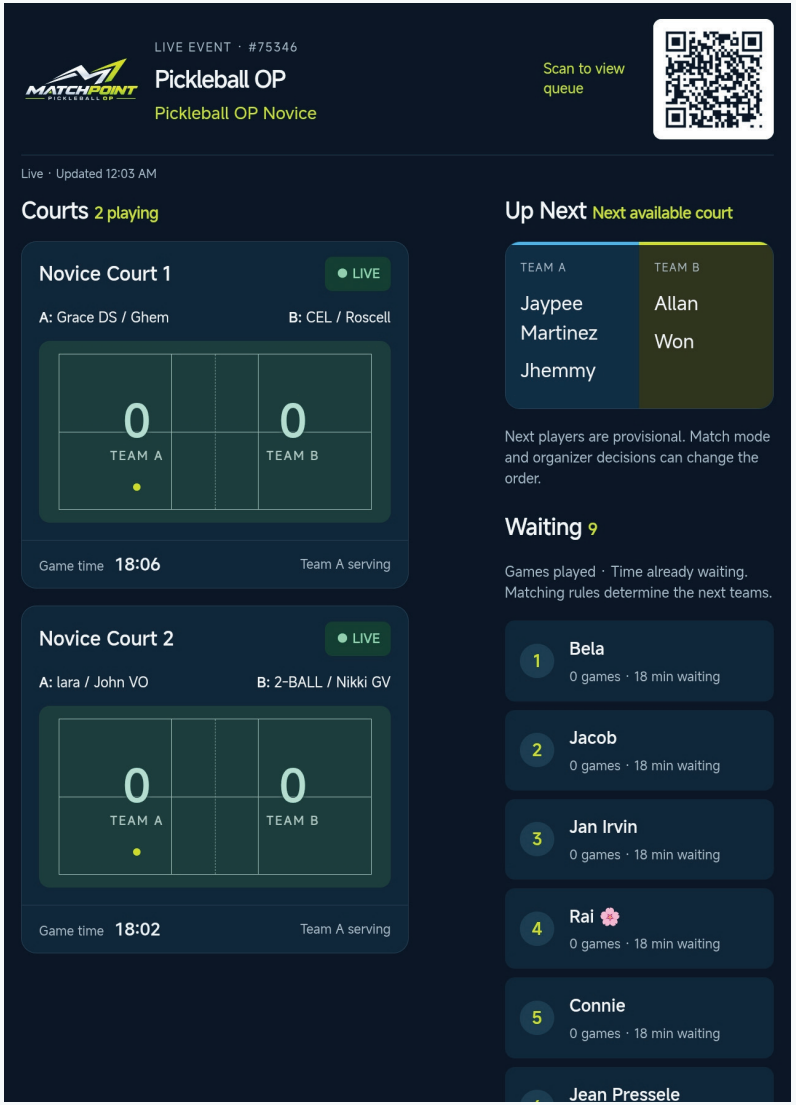

Tap **Player queue QR**. Choose **Download QR** to print or share it. Players scan it with their phones to view the queue.

Use the right QR

Player queue QR: view the waiting list.

Court QR: connect a scoring device (pages 3-4).

Example screens only. Share your own session's QR.
